Präzisionsdrehteile

Many thanks for your cooperation!

Ladies and gentlemen,

As the year draws to a close, we would like to thank you for your confidence in us and your cooperation in 2005!

This year, too, we are contributing to a charitable cause instead of distributing gifts to our clients, namely the relief organisation «Brücke-le pont» (www.bruecke-lepont.ch), which supports a variety of interesting development projects in the poorest countries of the world.

There have been several changes at Andres AG in the current year. The most important ones are mentioned here in our first newsletter. All this investments have been initiated in order to better serve our clients, and more extensively, too.

We already look forward to further joint cooperation with you and continue to offer our support and know-how.

We wish you happy and meaningful holidays and a great start to 2006.

*Yours sincerely,
Andres AG Precision Turning Parts*

Dominic Andres

PS: Our works will be closed from December 24 up until and including January 2, 2006!

In 2005, we purchased 3 new single spindle PNC-machines of the type Tornos DECO 2000/10.

CNC-capacity extended

We have extended our CNC-production capacity with new investments and can now boast of eight DECO 2000/10 and two DECO 2000/13 machines.

We have also invested in new additional processing. Apart from the thread whirling we can now also perform deep-hole drilling directly on the machine. The deep hole drilling device is equipped with a 350 bar high pressure pump. This permits high precision drilling with a high proportion of diameter/length. For example, we are presently drilling a diameter of 0.6 mm (!) and a length of approx. 20 mm (~ 35 x D!).

350 bar high pressure pump with cooling unit, oil mist suction and extinction device.

The screenshot shows the Andres AG website interface. On the left, there is a navigation menu with icons for 'REPERATUR SERVICE', 'Deutsch', 'Englisch', and 'Präzision für Spitzenprodukte'. The main content area features a large image of a person working on a precision part, with text in German: 'Perfekte Präzision für perfekte Qualität'. Below this, there is a table with technical specifications and a list of services: 'Schulungsteilnehmer', 'CAD/DFC-Beratung', 'Produktionskosten (Material) P/3M', 'Montage- und Instandhaltung', 'Reparaturarbeiten', 'Schulungsteilnehmer (Halter) / Spindel', 'Schulungsteilnehmer (Halter) / Spindel', 'Schulungsteilnehmer (Halter) / Spindel', 'Schulungsteilnehmer (Halter) / Spindel'. The footer includes the Andres AG logo and the text 'Präzision für Spitzenprodukte'.

WWW.ANDRESAG.COM

Andres AG has been online since summer 2005! Our modern website is clearly structured and gives you detailed information on our range of products, our infrastructure, our quality control and much more. Of course, you will also find information on contacting us and how to find us, etc.

A peek into the machine room with the two tool revolvers with 16 tools each.

World first!

In spring 2006, a new machine is due to arrive for the production of the most complex parts. This is a CNC-lathe of the brand Maier, type ML 20 F. A highly flexible machine, it has 15 axis and a genuine 4-part system, that is to say, four independent shuttles ready to go.

Four tools that work simultaneously – a world first for CNC-lathes! The machine has two 16-station tool revolvers and is equipped with up to 38 tools. With this machine, we will be able to increase our diametrange, as the maximum aperture is 20 mm.

The new ISO certification for Andres AG

Quality management according to ISO 9001:2000

In the current year, we have restructured our management systems towards an intranet-based fractal management system. The TQM-based processing hub completely integrates work safety, among other things. Our acknowledged aim for an almost completely paper-free management system has thereby been achieved. At the end of October 2005, the new system was immediately and successfully re-certified according to ISO 9001:2000. The centre of certification is, as ever, the SGS (Switzerland).

Our present certification can be found as a download on our web site under «Quality/QMS».
